Professional Summary

AI Engineer (GenAI & LLM Applications) with 2+ years of experience in Python-based backend systems, data pipelines, and API integrations at HCLTech. Experienced in building scalable workflows and automation systems, with hands-on exposure to Generative AI including prompt design, LLM integrations, and retrieval-based systems.

Core Skills

Programming: Python, SQL

AI/GenAI: Prompt Engineering, LLM APIs, RAG (Learning), NLP Fundamentals

Frameworks: FastAPI, Streamlit, LangChain (Conceptual)

Tools: Git, Jupyter

Data: ETL Pipelines, Data Modeling, Automation

Professional Experience

HCLTech — Analyst

- Built Python automation workflows reducing manual effort by 40%
- Designed backend processes and APIs for data integration
- Implemented validation frameworks ensuring 99.9% accuracy

HCLTech — Graduate Trainee

- Built data processing workflows handling 100K+ records
- Developed backend logic for reporting systems

RhythmFlows — Software Engineer Intern

- Developed REST APIs and optimized SQL queries
- Built automation tools improving performance by 50%

Generative AI Projects

AI Document Q&A; System

- Built RAG-based system using OpenAI and Python
- Implemented embeddings and retrieval logic
- Designed structured prompts and validation

Text Summarization Tool

- Developed LLM-based summarization tool
- Designed prompt templates and handled edge cases
