Professional Summary

AI Engineer (GenAI & LLM Applications) with 2+ years of experience in Python-based backend systems, APIs, and data pipelines at HCLTech. Hands-on exposure to LLM integrations, prompt engineering, and retrieval-based systems. Focused on building scalable AI-driven solutions for real-world automation and decision-making.

Core Skills

Programming: Python, SQL

AI/GenAI: Prompt Engineering, LLM APIs (OpenAI), RAG (Learning), NLP Fundamentals

Frameworks: FastAPI (Basic), Streamlit (Basic), LangChain (Conceptual)

Tools: Git, Jupyter

Data Systems: ETL Pipelines, Data Modeling, Automation, Validation

Professional Experience

HCLTech — Analyst

- Built Python automation workflows reducing manual effort by 40%
- Designed backend processes and API-based integrations
- Implemented data validation frameworks ensuring 99.9% accuracy
- Optimized workflows for scalable data processing and reliability

HCLTech — Graduate Trainee

- Developed data processing workflows handling 100K+ records
- Built backend logic for reporting and operational systems

RhythmFlows — Software Engineer Intern

- Developed REST APIs and optimized SQL queries
- Improved system performance by 50% through query optimization

Generative AI Projects

AI Document Q&A; System (RAG)

- Built a document-based QA system using OpenAI API and Python
- Implemented text chunking, embeddings, and semantic retrieval
- Designed structured prompts to improve accuracy and consistency
- Reduced hallucinations by grounding responses in retrieved context

Text Summarization Tool

- Developed LLM-based summarization tool for large text inputs
- Used prompt templates to control structure and output quality
- Added validation to handle inconsistent responses
